

## here's info needed to....

### *View Bread Crumb*

Bread Crumb is a navigation function that displays the string of navigation selections during a session in the application. It allows the user to navigate from the string area rather than the Tree View. Some users prefer this way when the Tree View gets long.

1. From the Application bar, click on the Options button to the left of the Lightning Bolt Action button.
2. Select View Bread Crumb. The Bread Crumb view displays under the application buttons.
3. The navigation string flows from left to right. The worker can click on any one of the “crumbs” and return to that icon or folder in the application.
4. The last “crumb” is highlighted in the Tree View for your information.
5. Try it out it as another way to navigate.
