Introduction

This document provides file layout specifications for Managed Care Organization (MCO) reporting of Healthcare Effectiveness Data and Information Set (HEDIS) measure data collected using the hybrid method to the Minnesota Department of Human Services (DHS).

This data is being collected for **measurement year 2014**, for the HEDIS hybrid measures listed in the following table. All eleven measures are required for the Families and Children contract; four measures as indicated in the table are required for the Special Needs BasicCare (SNBC) contract.

HEDIS Measure Name and Abbreviation	Report for Families and Children	Report for SNBC
Adult BMI Assessment (ABA)	Yes	Yes
Childhood Immunization Status (CIS)	Yes	
Immunizations for Adolescents (IMA)	Yes	
Human Papillomavirus Vaccine for Female Adolescents (HPV)	Yes	
Cervical Cancer Screening (CCS)	Yes	Yes
Controlling High Blood Pressure (CBP)	Yes	Yes
Comprehensive Diabetes Care (CDC)	Yes	Yes
Prenatal and Postpartum Care (PPC)	Yes	
Well-Child Visits in the First 15 Months of Life (W15)	Yes	
Well-Child Visits in the 3rd, 4th, 5th & 6th Years of Life (W34)	Yes	
Adolescent Well-Care Visits (AWC)	Yes	

The due date for submission of these files to DHS is **September 1st, 2015**.

Submitted files should meet these criteria:

- Files should have individual recipient-level data, showing one row per recipient as described in the section File Layout below.
- Denominator data must include the required number of valid recipients sampled per measure, per program, as described in HEDIS 2015 Technical Specifications for Health Plans, Volume 2, Guidelines for Calculations and Sampling. In most cases, this number will be 411 recipients.
- Use all optional exclusions applicable to these measures, as indicated in the HEDIS 2015 Technical Specifications for Health Plans, Volume 2.

Summary of Changes for 2015

The changes to this file layout for reporting due in 2015 are as follows:

- The Cholesterol Management for Patients with Cardiovascular Conditions (CMC) measure was removed because of the retirement of that HEDIS measure by NCQA.
- The Comprehensive Diabetes Care (CDC) submeasures LDL-C screening, LDL-C control <100 mg/dL, and BP control <140/80 mm Hg were removed because those indicators were retired by NCQA.
- An additional valid value was added to all numerators, to distinguish whether the recipient is present in the numerator due to administrative data, or medical record review (MRR).
 - MCOs should enter the following valid values for all numerator variables in this file:
 - '1' if this member is in the numerator of the measure **due to administrative data**
 - '2' if this member is in the numerator of the measure **due to medical record review (MRR)**
 - '0' if the member is not in the numerator or the information is missing
 - Note that administrative data includes MCO claims data, and other sources of supplemental data used in the calculation of HEDIS measures (such as immunization registries).
- Only two denominators are required for the Comprehensive Diabetes Care (CDC) measure – one for the HbA1c <7.0% submeasure, and one for all other submeasures.
